

ASSET	THREAT	RESOURCE CONDITION TARGETS	MANAGEMENT ACTION TARGETS
Water use	Altered flow regimes	<p>A. Maintain and where possible improve flow regimes in all river systems by 2010.</p> <p>B. Negotiate environmental flow regimes in high priority and emerging stressed river systems by 2008.</p> <p>C. A 50% increase in the proportion of water derived from reclaimed water sources by 2010.</p> <p>D. Ensure all groundwater is managed in conjunction within Permissible Annual Volumes by 2010.</p> <p>E. The natural flow regimes of estuaries in undeveloped areas are maintained at 2003 levels.</p>	<p>1. Complete Water Resource Assessments of the Barwon and Moorabool River systems by 2005.</p> <p>2. By 2004, make recommendations to Government on the implementation of the Woody Yaloak and Lough Calvert Drainage and Diversion schemes review.</p> <p>3. By 2006, negotiate an environmental flow regime for the Moorabool and Barwon Rivers.</p> <p>4. By 2005, identify and prioritise all flow-stressed rivers (including estuaries) in the Corangamite Region.</p> <p>5. From 2003, continually improve the capacity of water users in urban, industrial and rural communities to identify and implement options to reduce water consumption by at least 5% by 2008.</p> <p>6. From 2003, improve cooperation between water authorities and local government for reduced water use and greater water reuse.</p> <p>7. From 2003 to 2008 progressively implement groundwater management plans for the Nullawarre, Bungaree, Warrion, Gerangamete, Colongulac, Gellibrand and Jan Juc Groundwater systems.</p>

TABLE 28. TARGETS FOR THE REGIONAL ASPIRATION - DEMANDS FOR WATER USE BALANCED AND MANAGED IN ALL FOUR RIVER BASINS
